“Getting Connected to your Data – A Reproducible Workflow for Data Wrangling”

Presented by

Jean-Paul Courneya, MS

Bioinformaticist and Data Scientist
Health Sciences and Human Services Library
University of Maryland, Baltimore

Wrangling. Munging. Data Sanitation. These and other names describe an aspect of the data analysis life cycle typically thought of as boring and unglamorous, but which occupies the majority of time spent during a data analysis project. The time you spend in preparing your data for analysis, while crucial, cuts into the time available for using software to produce a visualization, calculate a statistic, or run a favorite machine learning algorithm. The goal of this seminar is to provide a reproducible workflow for performing your own data wrangling. I will suggest methods to help you to: 1) get to know your data, 2) cultivate habits that will help you to spend less time on wrangling, and 3) optimally prepare your data for the output you're interested in producing.
